INTRODUCTION.

The one hundred and seventeen new texts here presented are the first of the Haverford Library Collection of cuneiform tablets to be published. This collection, consisting of four hundred tablets, was purchased in New York in the autumn of 1901 and presented to Haverford College by T. Wistar Brown, President of the Corporation of that college. During the winter of 1901–1902 a catalogue of the collection was prepared, but my departure for Palestine in June, 1902, made further work upon these tablets impossible until the autumn of 1903. Since then they have received such time as could be spared from other studies and the duties of instruction. As these conditions of work will make it impossible to complete the editorial labor upon the whole collection for some years, it has seemed best to issue the text in parts, so that the material may be accessible to scholars with as little delay as possible. With the last part a sign list and vocabulary will be issued.

Although the tablets were purchased in New York, there is reason to believe, as the title of this work indicates, that they came originally from Telloh. Since some peculiar claims have been made of late as to power to divine the original provenance of tablets purchased in the markets of the world, a few words may be in place concerning the reasons which lead me to believe that the Haverford Library Collection was once a part of the temple archives of Telloh. The present writer lays no claim to powers of divination beyond the ken of his fellow-workers. The reasons, then, are as follows:

1. In 1894 the workmen of M. de Sarzec at Telloh discovered a chamber which contained an immense number of tablets—estimated at thirty thousand. There were so many that it was impossible for M. de Sarzec and his assistants to properly care for them. Many tablets were accordingly stolen by the Arabs. In the campaigns of 1895, 1898, and 1900 somewhat similar finds were made.

2. Since 1894 many tablets of the period before Hammurabi,—tablets, too, of similar varieties, form, clay and palaeography,—have been offered for sale in different parts of the world. The British Museum has acquired many, which have been published in *Cuneiform Texts From Babylonian Tablets in the British Museum*, Parts I, III, V, VII, IX, and X. The Royal Museum at Berlin acquired some three hundred and ten, which were published in 1901 as Heft XVI of the Museum’s *Mittheilungen aus den Orientalischen Sammlungen* by Reisner under the title *Tempelurkunden aus Telloh*. These publications contain texts similar in nature and appearance to those which came to the Louvre from Telloh, a part of which M. Thureau-Dangin published in his *Tablettes chaldéennes inédites*, 1897, and *Recueil de tablettes chaldéennes*, 1903. M. Thureau-Dangin assures me in a private letter that the Louvre contains many unpublished tab-

---

1 They were purchased of Mr. Gullabi Gulbenkian. A brief notice of the collection was published in the *American Journal of Archaeology*, Vol. VI (1902), p. 36 ff.

lets of the same kind as those contained in the publications of the Museums of London and Berlin. The General Theological Seminary of New York City acquired in 1896, through the generosity of Dean Hoffman, a collection of cuneiform tablets, a part of which consists of tablets similar in form and contents to those under discussion. Some of these were published by Radau as an appendix to his *Early Babylonian History*. The American Vice-Consul at Jerusalem, Mr. Herbert Clark, has also a small collection of tablets of a similar character which he kindly permitted me to examine. They are evidently from the same source. A gentleman in Philadelphia has also recently acquired a small collection of the same nature and style. The Haverford tablets, as may be seen from a comparison of those published below with those contained in the works mentioned, are of the same period and the same varieties. The only reasonable conclusion is that de Sarzec's discovery explains why so many such tablets have been offered for sale in different parts of the world.

3. An internal study of the tablets supports this conclusion. Girsu, Nina, Kinunir, and Tigabba,—all parts or suburbs of the city which once flourished on the site of Telloh,—are mentioned more often than other towns. The theophorous proper names contained in these texts bear the names of Ningirsu, Bau, Nina, Nana, Ninmar, Ningishzida, and Ninshah,—all gods of this town,—more frequently than those of other deities.

For these reasons it is believed that the sub-title of this work is justified. In spite of all claims to the contrary, there is no infallible Assyriological wizard capable of discerning the provenance of tablets in the absence of objective evidence which will appeal to other specialists. It is not pretended that such a wizard resides *chez nous*. If, therefore, the above reasons do not convince the reader, he is at liberty to believe that the source of these tablets is unknown.

For the benefit of the friends of Haverford College who are not Assyriologists a few words about Telloh may not be out of place. Telloh is a mound more than four miles long in southern Babylonia, about sixty miles north of Mugheir, the Biblical Ur of the Chaldees. Excavations were begun here by M. de Sarzec, the French consul at Bassorah, in March, 1877. De Sarzec dug for three months in 1877, more than three months in 1878, about four months in 1880, two months and a half in 1881 and many times afterward until his recent death. He has dug systematically, unearthing palaces and temples of the highest antiquity, and bringing to light a most remarkable city. Many inscribed objects have been recovered, the most remarkable of which is the so-called Stele of Vultures, bearing an inscription of Eannadu who reigned about 4100 B.C., and eleven diorite statues of Gudea who ruled about 3000 B.C. Thousands of tablets have also been recovered.

From these inscribed objects we learn that the city which created the mound of Telloh was called Shirpurla, and that it consisted in reality of four other cities, Girsu, Nina, Erim, and Uruazagga. Kinunir and Tigabba were also either parts of it or suburbs of it. Each settlement was originally independent. The oldest king of this region of whom we know, Urkagina, about 4300 B.C., calls himself simply King of Girsu. Soon, however, one ruler governed all under the name Shirpurla. Early Babylonian history is a record of struggle for hegemony between different cities. In this struggle Shirpurla at times had preeminence. Then her rulers called themselves kings. Often, however, Shirpurla was the vassal of another state; then her rulers called themselves *Patesi*. Some of these, like Gudea, were powerful monarchs and practically independent. At the time from which our tablets come, the period of the third dynasty of Ur, about 2400 B.C., the kings of Ur had usurped all power and the *Patesi* were mere shadows.
The tablets here published are from the reigns of Dungi, Bur-Sin II, and Gimil-Sin of the third dynasty of Ur. The texts published in this part are with one exception dated. It was thought best to publish the dated tablets first. An attempt has been made to group the tablets bearing the same date together, but as the tablets are of different sizes the exigencies of space frequently made a different order necessary. Other considerations sometimes led me to depart from this order, but broadly speaking the texts below are grouped according to date.

The language in which these tablets are written is Sumerian, the tongue of the pre-Semitic inhabitants of Babylonia. It has been shown that the inhabitants of Shirpura were Semites, but that they learned their writing from the Sumerians, and while they probably spoke Semitic the force of custom was such that down to the conquest by the city of Babylon they continued to employ the Sumerian for writing. From the earliest times, however, the native Semitic idiom made itself apparent. Similar Semitic idiom appears in our texts: e. g., in No. 18; IV, 10, pl. 9 the use of ama as a preposition instead of the use of a post-position is due to Semitic idiom. Also in No. 324, l. 2., pl. 19 we have: AZAG ka-lum, “the money in full,” kalum being the Semitic kalu, Hebrew, A comparison of No. 61, IV, 10 (pl. 1) with OBI. No. 125, affords us a new Sumerian ideograph, BA-AN-LIL being synonymous with BA-TU, “to bring in.”

The whole class of tablets, to which the Haverford Library Collection belongs, are of a business and administrative character. This holds good of the texts here published. It is customary in some quarters to undervalue such tablets in comparison with religious texts, which usually are of a mythological or magical character. I would by no means undervalue the religious tablets, but would nevertheless maintain that the value of economic texts is quite as great. When the temple records and business documents from Babylonia have been published in sufficiently large numbers and have been adequately studied, it will be possible to form a picture of the economic environment of an ancient people such as can be made of no other people of antiquity known to us, and this picture will, I believe, prove to be of no less value to the study of religion than to the study of political institutions. Not the least valuable aspect of these texts is their contribution to historical knowledge. They come from a time when there was no fixed era, and records were dated from important events. A glance at the dates given in the register of tablets below will afford a good example of the way in which these business documents portray the political conditions of the times, giving us a record of wars, raids and conquests of which we often have no other information than that which such tablets afford.

Sometimes these tablets relate to private business. This is the case with No. 340, pl. 36, which records that six slaves of one man worked two months in the field of another. Another instance occurs in No. 183, pl. 18, where one man receives four earthen-ware jars from another. This is partially the case with No. 334, pl. 36, where we have the payment to the temple of the principal of a loan, the interest remaining unpaid.

Sometimes the business transacted was, perhaps, of a political nature. We are in doubt whether the lists of amounts of grain, such as No. 18, pl. 9, translated below, were records of taxes paid in kind, or the payment of rents from fields of the temple estates, which had been leased to various individuals. The latter alternative is probably nearer the truth, since care was taken to withdraw the seed grain, which had probably been advanced by the temple or the tenant

---

* Cf. the writer's Semitic Origins, pp. 185, 186; also 186 n. 1.
at the beginning of the season. The Haverford Library Collection contains records of the assignments of tracts of land to different individuals. One of these, No. 193, pl. 30, is translated below. Various phases of the management of the arable fields of the temple and the collection of income from them are recorded in No. 61, pl. 1; No. 24, pl. 16; No. 102, pl. 21; No. 26, pl. 22; No. 91, pl. 31; No. 81, pl. 32, 33; No. 393, pl. 37; No. 20, pl. 40; No. 60, pl. 41; No. 63, pl. 42; and No. 35, pl. 45.

Connected with the temple were a large number of priests, scribes, women, slaves, and officers of various kinds. The names of some of these are well known, although we cannot yet determine the functions of each. One class, the name of which occurs frequently in our tablets, is in Sumerian A-RU-A. One of these (pl. 3, No. 17, IV, 12) takes an ox away from a herd. Another (pl. 15, No. 45) offers an expensive list of sacrifices. In pl. 23, No. 29, cols. II, III, and IV, are a number of A-RU-A, each standing at the head of a list of women to whom amounts of wool for clothing were assigned. Apparently, therefore, the A-RU-A had charge of the devoted ones or the sacred women. Evidently, they were men of dignity and authority.

A large number of these tablets contain records of the quantities of grain or other rations, or the quantities of wool for clothing, which were assigned to the staff of temple officials. Such are Nos. 379, pl. 2; 257, pl. 6; 396, pl. 8. 29, pl. 23, 24; 54, pl. 24; 66, pl. 25; 74, pl. 26; 248, pl. 28; 30, pl. 29; 246, pl. 30; 68, pl. 43; and 272, pl. 49.

Special messengers were sometimes sent out, for whom special provision of food, drink and oil was made. Such seems to be the meaning of No. 217, pl. 43. The temple apparently also owned a large number of boats to ply on the canals and bring in the produce of the fields. No. 188, pl. 49 (translated below), gives the number of these and their capacity at a certain date. It is true that they are attributed by the tablet to a certain man, but he was probably the officer in charge of them, since the temple kept a record of them.

Connected with the temple estates were also extensive pasture lands. Herds of cattle, sheep, goats and asses were each year entrusted to different shepherds to graze on these lands. At certain times “round ups” of these cattle were made, and a record of the state of the herds taken. Such records are contained in Nos. 17, pl. 3 (translated below); 370, pl. 20; and 80, pl. 34, 35. The shepherds were held to strict account for losses occurring through their neglect, but were not responsible for losses by accident or wild beasts unless due to carelessness. At the “round ups” the increase of the herd was noted, as well as the losses. Animals taken away for any purpose, such as labor or sacrifice, were not counted as losses, but were included under a separate entry. Tablets of the sheep-shearing time recorded the wool received from the sheep of the flock, classed according to age. Such is No. 3, pl. 38, 39.

In the tablets of these classes published in the present work one or two lexical items of interest may be noted. In pl. 3, No. 17, IV, 3, RUG-RUG is used after a singular. Radau (Early Babylonian History, p. 349 ff.) notes that, except in the text OBI. 126 RUG, is singular and RUG-RUG plural. Our text is proof that the rule was subject to other exceptions. A more interesting case is PUHAD-NU-UR. Radau (op. cit. p. 357) renders it “sucking lambs,” and (p. 399) argues that this is right because in the enumeration of wool the PUHAD-NU-UR

---

6 CTRM. X, No. 14113, I. 10 says of an A-RU-A, NE ERIM E-dingir-NINA, “who is a man of the temple of Nina.”

CORRIGENDA

TO

BARTON'S "HAVERFORD LIBRARY COLLECTION OF CUNEIFORM TABLETS," PART I.

P. 7, erase last sentence of the second paragraph,—the sentence which begins: "A comparison," etc.

P. 9, third line from the bottom, *instead of* BA-AN-LIL, *read* BA-AN-TUR.

P. 13, No. 334, line 4, *instead of* BA-AN-LIL, *read* BA-AN-TUR.
produced none. Reisner (Tempel Urkunden, p. 6) renders it “ungeschornes(?).” In No. 3, pl. 38, of our texts we find evidence that both are mistaken, since weights of the wool of the PUHAD-NU-UR are twice given, (cf. II, 2 and III, 7).

Other phases of temple life are reflected in these texts. For example, No. 297, pl. 36, gives the provision for three feast days, while No. 229, pl. 49, is the record of two oxen appointed for sacrifice at the temple at Bau on certain days.

One tablet, No. 113, pl. 18, records the establishment of an office of food-making (or food-makers), while another, No. 144, pl. 50, records the appointment of two clerks in an office of accounts.

One of the most interesting of the tablets here published is No. 220, pl. 36. It records the establishment of a park in the city-section Girsu by the son of the Patesi UR-LAMA—the Patesi whom M. Thureau-Dangin restored to history a few years ago. The text is translated below.

Most of the tablets which mention places at all mention those near Shirpurla, though a number of other Babylonian cities are mentioned also. No. 288, pl. 30, is, however, a record of rations deposited at Susa.

These texts contain one or two items of historical interest. For example, in No. 91, pl. 31, VIII, 7, 8, we read GÜ ID KIS-GIM GUB [E] dingir-DUN-GI LUGAL-E: “on the bank of the canal Kishgim, he built [the palace] of Dungi, the king.” Cf. Reisner, op. cit. No. 117, VII. 23-26. The context in which this stands will be found chronologically valuable. No. 81, pl. 33, VIII, 13, presents a date which I have not noticed elsewhere. It reads: MU-US-SA MA-SŪ-SA-SAHAR dingir-DA-GAN BA-RU, “the year after the MA-SŪ-SA-SAHAR of Dagon was built.” MA indicates that the structure was a ship, but it is, perhaps, a variant of E. If so, this is the year after that mentioned in Reisner’s Urkunden, No. 122, II, 4, where we read MU E-SŪ-SA-SAHAR (dingir)-DA-GAN BA-RU, “the year the E-SŪ-SA-SAHAR of Dagon was built”, and would be identical with the year mentioned in Reisner ibid., IX, 2. Probably these two years are the same as those which Radau finds in the E. A. Hoffman collection, No. 101, but if his transliteration is correct (the text is not published), the wording is still different there. If this identification is correct, the date belongs to the reign of Dungi. It may, however, be that the “ship” was made at a different time from the temple, in which case this is a new date.

Another new date is found in No. 37, pl. 5, MU MA-TEMEN-MUH BA-GIM: “The year the ship Temen-muh was consecrated.” To what reign this year belongs I do not know.

Still another interesting date is that of No. 61, pl. 1: MU dingir-SIS-KI KAR-ZI- [DA] E-AN-NA BA-AN-LIL, “the year Nan-nar Kar-zi-da was brought into the house of Anu.” This is probably a variant of OBI. No. 125, 5—a date in the reign of Dungi.

Translations of specimens of the various classes of tablets represented here are appended.
